This is the report for the extra credit game project.

How did I participate in this project?

It might seem weird but I got the main character role here (just kidding) because I am the only one who could download PyGame which is a third-party application we used and Visual Studio to run the code. I mainly worked to run the code and find the error out to fix.
At the end of the deadline, we worked many hours but still had two major problems which were problems in displaying the result of the game like "Congrats You won!" or "Sorry, You lost" and the other one is the game didn't stop even after eliminating all of the infected student (or talkative students).
We somehow gave up to fill these gaps because we were too tired. But just some hours before the class, I was intrigued and tried to fix that on my own. After an hour of working on it, all of the problems were solved. The game got the goal we wanted. Then, I happily let my teammates know that we can 100% successfully present our game to you.
This is the summary of my participation throughout the process.

Who participates the most?

I would say Pone Nyet Participates the most. She carried the team mostly in finding resources and getting help from AI. We tried to figure it out on our own at first and then we combined all the ideas and had a model code for the game. Then all of us are working on modifying the game to match the concept. Pone Nyet mainly works on modifying the code. I figured out the error and she predominantly worked to find out which gonna be the best to modify the error.
